ORTH GLENGARRY NORD	The Township of North Glenga Drinking Water Quality Management System			
Document Title: QMS Review and Pro	ovision of Infrastructure Penert	QMS Form Number: QMS SYS-F3		
Document Title. Qivis Review and Pri	ovision of infrastructure Report	Revision Number: v4		
Authorized By: Angela Cullen	Issued Date: August 10, 2010	Revision Date: August 14, 2023		

QMS Review and Provision of Infrastructure Report

A copy of this report, once completed, is to be forwarded to the Owner.

Date of Review	Tuesday August 29, 2023		
Review Cycle	Sep 2022-Aug 2023		
Drinking Water Systems Included	☐ Alexandria DWS ☐ Glen Robertson DWS		
Infrastru	cture Review Participants		
Name	Signature		
Tim Wright			
Dean McDonald	(Leeks)		
Angela Cullen	Short I		
Roch Seguin	July Sat		
Jacob Rheaume	JACOS RIGALINE		

Conclusions and Recommendations (attach any supporting documents and records)

- > No source shortfalls or capacity issues at this point for both Glen Robertson and Alexandria
- No major changes to risk or processes for both systems
- System growth
 - No major expansion to system planned in the next year
 - Processes and standards being created at County Level, to add additional TWP requirements
 - Other limiting factors such as wastewater system capacities and servicing areas shortfall
- ➤ Infrastructure refurbish/replacement in WTP/Distribution
 - Planned equipment repair/refurbishment
 - Planned watermain replacement program in Alexandria
 - Planned future work towards Alexandria on-going water loss
 - Maxville Water Project follow-up requirements (to be determined)

Discussion Item	Notes, Comments
1. Purpose Review	discuss rational and reasons for review
2. Agenda	review topics to be discussed
3. Growth	 Limited to no growth in DWS to date EVB mapping for future development, Alx done/Max being developed. but no service agreements to date Alx limiting factors: pump stns needs, force main limitations, lagoon capacity, treatment decline under ice cover; lack of industry/opportunities, Max limiting factors: pump stn needs, lagoon capacity; lack of industry/opportunities GIn limiting factors: well capacity; lack of industry/opportunities Maxville Water 34 residents still on flat rate and not inspected to date to determine next steps on connections as unconfirmed connections are paying flat rate, proposed to submit listing of residences to Building Department to monitor for sale of residence a TWP condition of residence sale is meter connection through lawyers report/inquiry which can be tracked through Building/Planning Growth Tools/Mechanisms/Processes To be formalized on management side, currently large developer submits engineering plans with hydraulic calculations which is reviewed through third-party consulting hydraulic model results of modelling and comments from environmental service manager are discussed with contractor and all issues must be addressed before service agreements are approved Counties are working on standardized construction specs for all municipalities for large scale project or multi-residential to ensure ECA requirements are added as an appendix or as a condition to any applicable projects
4. Input from Public Planning Departments	 Population Growth: SDG Study Draft complete (growth forecasting) projected 0.5% increase annually (includes pre-planned development) expect steady employment and population growth North Glengarry does not have any deficient land needs to support or promote growth No specific area targeted for expansion at this time limiting factors include current sewage infrastructure/lagoon capacity
	 not all areas within village boundaries are serviceable Projects in Planning Stages IHA development: no movement due to sanitary connection, but they have submitted plans for which are currently under review.

Discussion Item	Notes, Comments
F. Dravious Outcomes	 Maxville Subdivision: no movement all preliminary discussions layout development McDougald St Muti-Residential: site development only, no service agreement to date (drawings are being peer reviewed) Other multi-phase projects or large residential: no movement East Boundary/St James Multi-unit: no service agreement to date Cnty 22/Carr St East: inquiry for sub-division development, land sales required so no imminent project expected Elgin St West: inquiry for low-income apartment/multi-story Bishop/Maple: inquiry for development West Boundary/Front: inquiry for multi-storey building
5. Previous Outcomes from last Review and Provision of Infrastructure Report	 No source shortfalls or capacity issues to not in Alexandria and Glen Roberston reviewed various studies from 2003-2011 No major changes to risk levels in Alexandria and Glen Robertson System Growth No major expansion to system planned in the next year Other limiting factors such as wastewater system capacities Plans are in place to maintain or refurbish areas in WTP/Distribution Equipment in need of repair/refurbishment Watermain relining program Water meter replacement (Glen Robertson) Capital or Major Projects Concerns questions if Management Meeting can incorporate items from various reviews to ensure more communication to work at delegating tasks to ensure task completion previous budgeting forecasting model to be evaluating for usefulness Outstanding Issues To create processes for large expansion where Waterworks Dept not installing water mains (eg: subdivision) but as per chief building inspector counties are working on county wide plan questions about adjusting the management meeting structure to include QMS elements
6. Maintenance records (and outcomes of QMS SYS-P4)	 Maintenance programs are intact as per design schedules and tracking forms are in good shape Determined Roch is now in control of updates and version codes To ensure work is completed as per schedule issues with staff change over, new operators are gaining experience which should alleviate some of issues (time/knowledge) to ensure deficiency follow-up (Roch) external contracted maintenance work drifting from original dates, this may be a concern for achieving annual requirements Documentation some duplication of work form eRIS and Access E11 Roch determined proper work flow, to ensure operational continue to follow processes

The Township of North Glengarry Drinking Water Quality Management System

Document Title: QMS Review and Provision of Infrastructure Report

Discussion Item	Notes, Comments
7. New regulatory	Concerns Alx: to start equipment indexing; pro-active equipment replacement; elevated water loss; concern about completed construction documentation; unresolved equipment deficiencies Gln: coupling leak on piping; mineral deposits in well and potential impact on well pump; intermittent chlorine pump operating issues (P2); intermittent system flows No regulatory changes to note
requirements	
8. Compliance inspection reports	 MECP Inspections (September 8, 2022) Alx DWS: 100%, no issues identified Gln DWS: 100%, no issues identified QMS Audits & Conformance Status Internal: Oct 28, 2022 1 Non-Conformance (internal audit) 10 OFI (transferred to Action Item Tracking QMS SYS-T3) Next scheduled Sep 21/Oct 10 External: Oct 6, 2022 / Dec 1, 2022 Surveillance: Mj Non-Conformance (Multiple Issues-Resolved Dec 1) Re-Accreditation: Mn Non-Conformance (Construction Reports-Resolved Jan 31) Next scheduled Nov 28, 2023
9. Staff input	 2023 Capital Program Update (Tim/Dean/Roch to summarize) Alx Intake Dyke: Completed August, waiting for final report and CCTV footage Alx WTP VFD Replacement: ETA for receipt was cahgned from Sept 2023 to Feb 2024 Other option would be to source new equipment from different manufacturer Alx WTP Cl2 Gas Switch Replacement moved to 2024, complete system refurbishment no planned versus minor equipment replacement Valve and Hydrant Replacement: Dominion St S/Peel St E completed for future main replacement (4) construction planned for Thursday Aug 31 for remaining valves Glen Meter Replacement: 21 changed, 17 outstanding Glen WTP Building Expansion: engineering/design to be completed (2023); to add well casing cleaning to project specs North Glengarry Master Plan (10yr Capital Plan) EVB project, progressing, report due Oct 31, 2023 Cancelled Project: funds re-allocated (Flow metering and Watermain relining)

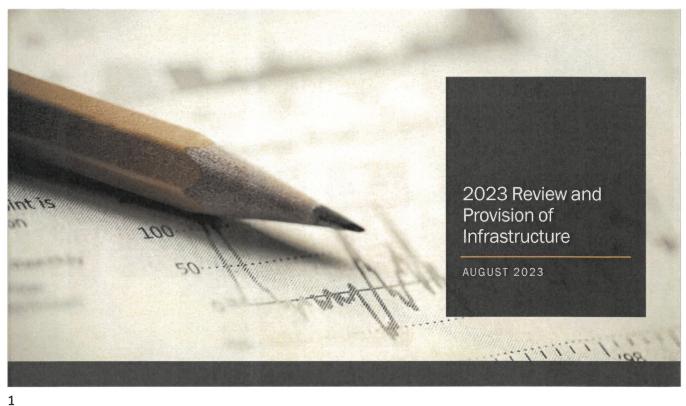

Discussion Item	Notes, Comments			
	 2024 Proposed Capital Projects (Tim/Dean/Roch to summarize) Dominion St Watermain Replacement 4" to 6" Chlorine Switch Over Replacement (from 2023) Infrastructure Locating Equipment to replace older equipment with more advanced, easier to use Leak Survey in regard to water audit to discuss need in Water Trending triggered from elevated water loss through internal tracking, External Contractor report identified need for next step Bulk Water Fill for contractors 			
	 2024 Proposed Budget Requests (Operations Water Related Only) Water Treatment			
10. Flow data and trends	reach out to Robbie (Tim to determine feasibility) Flow Data and Trends • Alx/Max — Raw Water:			
	 slight drop in overall flows noted drop in daily flow after main break algae still visible in source water, microcystin sample on-going increases noted in raw water after Jun 27 but levels have started to drop dkye installation to help with sedimentation issues no significant changes in raw water noted → quality findings from various reports, → no major changes noted from operational monitoring Treated Water: decrease in flows from previous years 			
-	 observed drop after main break repair process water slightly increased from previous year → no major changes noted from operational monitoring 			

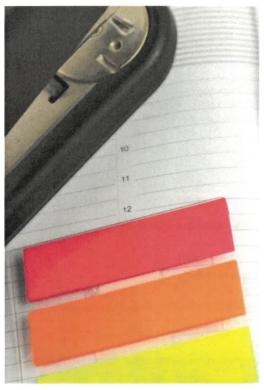

QMS Form Number: QMS SYS-F3

Discussion Item	Notes, Comments			
	– Distribution:			
	water loss/water audit results and next steps			
	quality discussion and trends			
	 → similar to previous years, degradation not as sever due to proactive flushing and monitoring techniques → noted minor increase in distribution turbidity May/Jun but levels leaving the WTP have decreased; no significant 			
	impact to date levels are still well below limits			
	• Gln			
	 Raw Water: flows are consistent with previous years and seasonal 			
	variations, minor increase observed			
	■ improved trending and monitoring due to SCADA			
	■ minor fluctuations in TDS/UVT			
	- Treated Water:			
	improved trending and monitoring due to SCADA			
	■ minor fluctuations in CT/pH			
	– Distribution:			
	Water loss/water audit results			
	quality discussion and trends			
	→ similar to previous year trending, degradation not as			
	severe			
	→ consumption minor increase from year to year			
11. Other items	Risk Assessments:			
(describe)	 36mth: completed 2022; next review 2025 Annual: completed July 2023, no issues identified 			
	Action Items:			
	Open Items: highlights to open items			
	Bst Stn generator, new contractor looking into repair of possible			
	leak			
	 Easten Welding looking at Gln WTP leak and singer valve 			
	replacement options			
	 noted that basin 1 effluent valve defective not drain valve 			
	 hydrant maintenance 25 hydrants completed to date (19 Max/6 Alx) 			

Other Notes

- Comments/Questions/Concerns
 - -Request to look into water loss for Alx and Maxville
 - Angela to compare dist flow vs sewage flows
 - to report showed non-revenu loss to determine if that included flushing values
 - request to send Tim graphs for 2023 WTP Flows and Water Loss tracking
 - -Angela to send draft Council Report for council update
- Additional Source Information
 - Raisin Region Conservation Authority: 2022 Annual Report
 - Garry River Watershed Report: 2007

Purpose

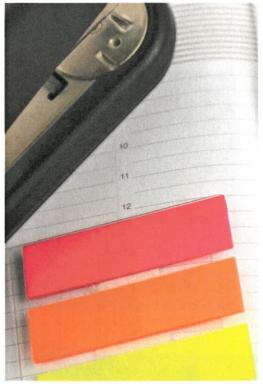

Ensure effective communication in regard to operations and maintenance

To be used as a tool for budgeting and planning

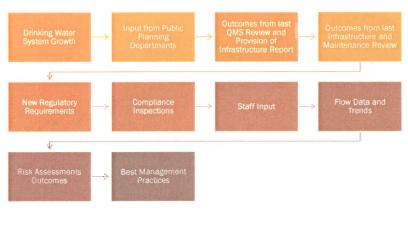

- Report should be communicated to council through staff report by Director of Public Works
 to give council understanding and advanced warning of potential budget requests

Ensures a consistent and regular review of the drinking water systems conditions and

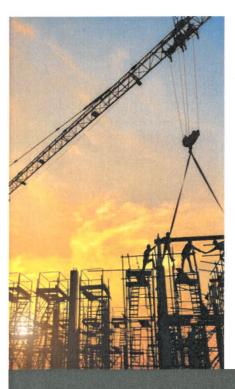

Results should be discussed during annual budget reviews

Agenda

3

Growth

No planned system expansion for 2024 for Alexandria/Maxville and Glen Robertson

- $\, \blacksquare \,$ EVB $\underline{\text{mapping}}$ for future development for Alx but no service agreement in place
- EVB mapping for future development for Maxville is being developed
- Limiting Growth Factors
 - Pump station issues/needs (SE Alx/NE Max)
 - · Forcemain limitations (Bishop PS)
 - Lagoon capacity issues (Alx/Max)
 - · Poor treatment under ice cover (Aix)
 - No connections on Transmission Main due to residual degradation
- · Lack of system redundancy/storage (Gln)
- $\bullet~$ Lack of industry and opportunity, area more targeted for retirement vs working class

Maxville Water

- 34 residents on flat rate and not confirmed on water meter to date
- ▶ 332 connection completed and inspected to date; 16 Exemptions
- To determine next step to enforce connection

~ Growth Tools/Mechanisms/Processes

Review and Provision of Infrastructure Previous Outcomes

PREVIOUS REVIEW DATE: SEPTEMBER 2022

- No raw water shortfalls or capacity issues identified in Alexandria and Glen Robertson
 - · Review various studies RRCA/South Nation
- No major changes to system risk identified
 - 36mth & Annual Review
- No DWS system expansion planned or targeted areas
- No significant growth/development identified
 - Some potential future projects IHA/Maxville Subdivision
 - Limiting factors include wastewater system capacities
- Infrastructure maintenance is covered through various planning methods
 - · Operational Budget/Capital Planning/Replacement Programs
- Concern about task delegation to ensure system coverage and task completion, minor changes to roles/responsibilities

OUTSTANDING ISSUES IDENTIFIED

- To create process/contractor package for large scale expansion where WW not installing works but will be handed back to WW for management.
- As per Chief Building Inspector: Countles are creating set of county wide construction standards
- Suggested that management meeting structure change to incorporate other elements to ensure communication
 - No changes to date, can review structure to determine what can be included

Maintenance and Infrastructure Review Previous Outcomes

REVIEW DATE: JUNE 2023

- Maintenance Programs are intact and operating as per design
 - · Schedules and tracking forms are up to date
 - · Roch to head changes and document control processes

To ensure work is being completed as scheduled

- · Staff changeover not as frequent as previous cycles
- · Ensure equipment deficiencies followed-up is completed
- External contractors annual targets are starting to drift, may cause issues with maintaining "annual" requirements

Documentation

 Some noted duplication of work, Operational staff prefer to record work in eRIS and Access E11 (flushing) as completed

OUTSTANDING ISSUES

- AIX DWS
- Proactive equipment indexing and replacement scheduling
- > Elevated water loss/water audit
- Construction documentation
- > Open defective equipment

Gin DWS

- > Coupling leak on main discharge line
- Mineral deposits in well casing and potential impacts on well pump operation
- > SHP2 intermittent dosing issues
- > Intermittent high flow issues

Inspection/Audit Reports

MECP COMPLIANCE INSPECTION

Alexandria DWS

- September 8, 2022
 - O Non-Compliance or Best management Practices
- 100% Risk Ranking
- 2023: to be scheduled by Ministry Staff (assume Sep/Oct)

Glen Robertson DWS

- September 8, 2022
- 0 Non-Compliance or Best management Practices
- 100% Risk Ranking
- 2023: to be scheduled by Ministry Staff (assume Sep/Oct)

DWQMS CONFORMANCE AUDITS

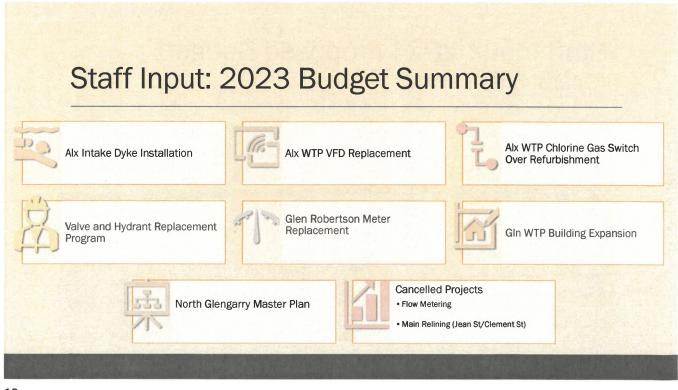

Internal Auditor: Ewen McDonald

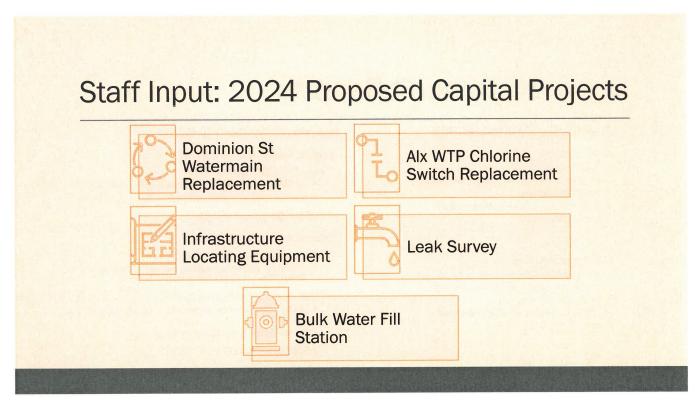

- > Oct 28, 2022: Internal Audit
 - 10 OFI (added to Best management Practices Listing) &
 - Non-Conformance (Internal Audit)
- > 2023: Scheduled Oct 10

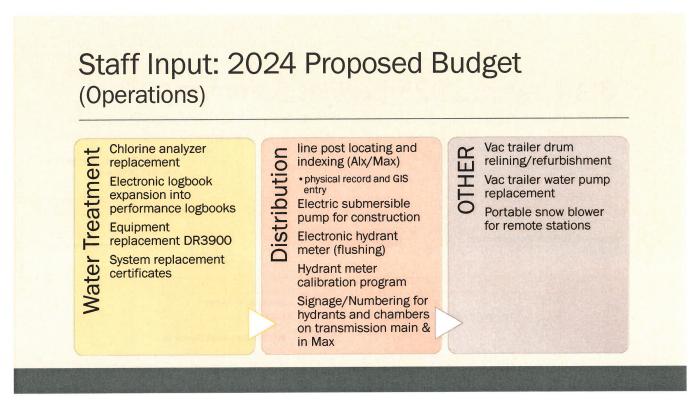

External Auditor: SAI Global

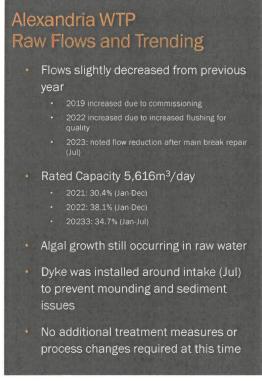

- Oct 6, 2022: Surveillance Audit
 - Mj Non-Conformance (Multiple Elements/Management Review/Internal Audits-Resolved Dec 1, 2022)
- Dec 1, 2022: Re-Accreditation Audit
 - Mn Non-Conformance (Construction Reports-Resolved Jan 31, 2023)
- Re-Accreditation Jan 2023/Certificate June 2023
- 2023: Scheduled Nov 28, 2023

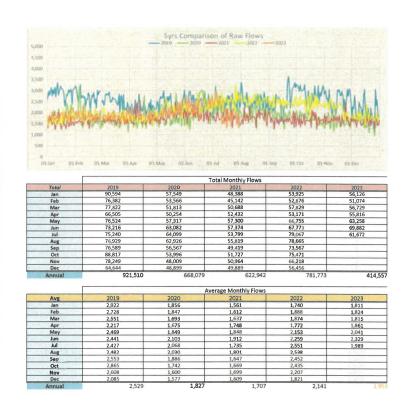

9

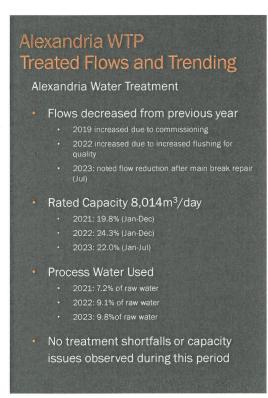

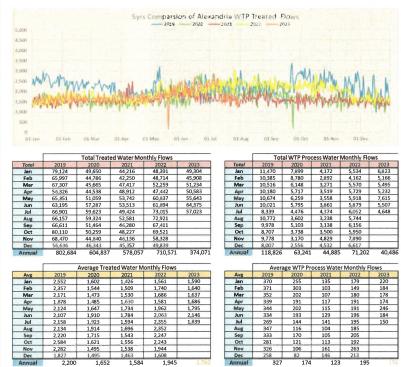

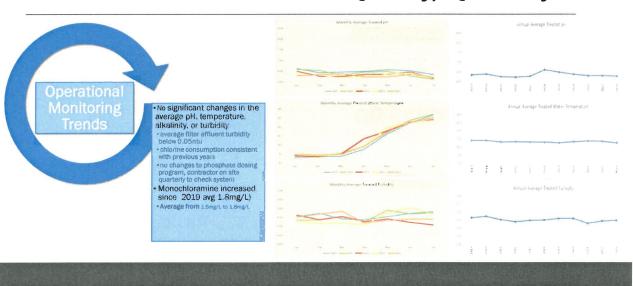

Alexandria Raw Water Quality/Quantity

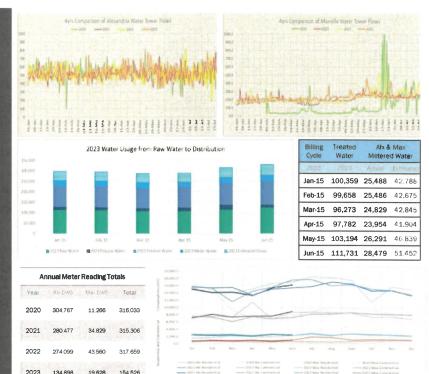

Alexandria Treated Water Quality/Quantity

Alexandria/Maxville **Distribution Flows Trending** · Flows in distribution up slightly but metered values appear to be slightly decreasing from year to year Overall Water Consumption (2023) · Water Audit was undertaken due to increasing water loss observations

- - - Flushing values are included in NRW, please note this is not considered water loss
 - - Discovered multiple contractors taking water without approval or notification
 - Budget for Bulk Fill Station (2024)Hydrant Use By-Law Creation
 - Bottom-Up night flow analysis to try to find system leaks
 - Improve various water data inputs from review of data

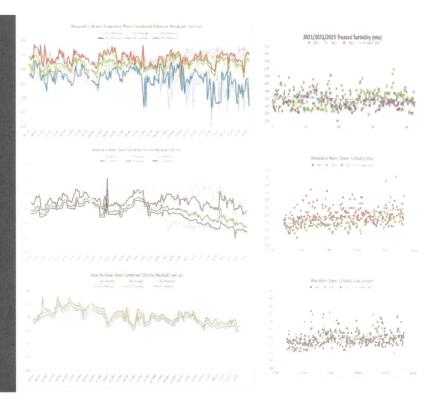

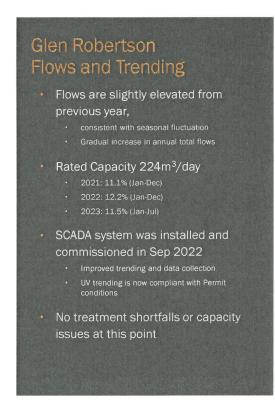

17

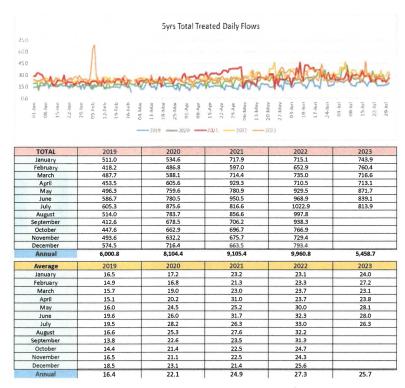

Alexandria/Maxville **Distribution Trending**

- Chlorine Residual
 - Distribution residual monitoring has improved due to closer tracking on WTP residuals, inputting operational objectives
 - Observing typical drops, adjusting processes to help turn over water
- Turbidity
 - overall from WTP levels are decreased as treatment improves
- Dead End Check

 - - Residuals around 1mg/L as per most recent testing

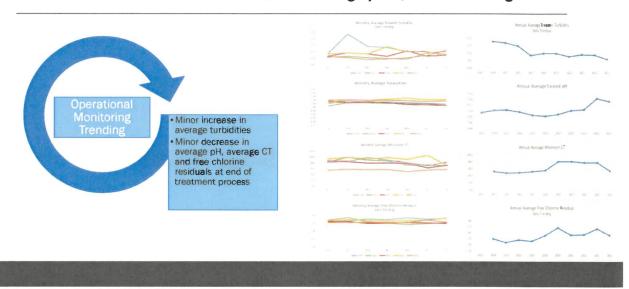

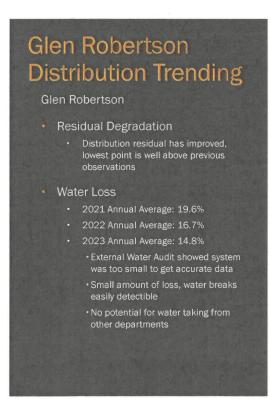

Raw Water Quality/Quantity

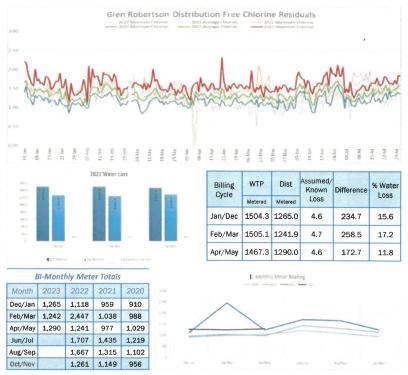

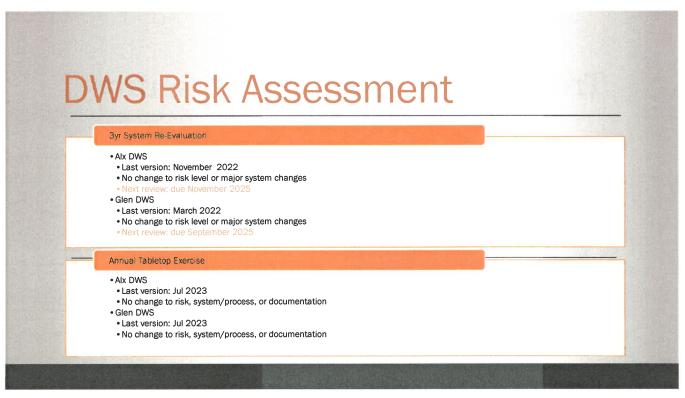

Treated Water Quality/Quantity

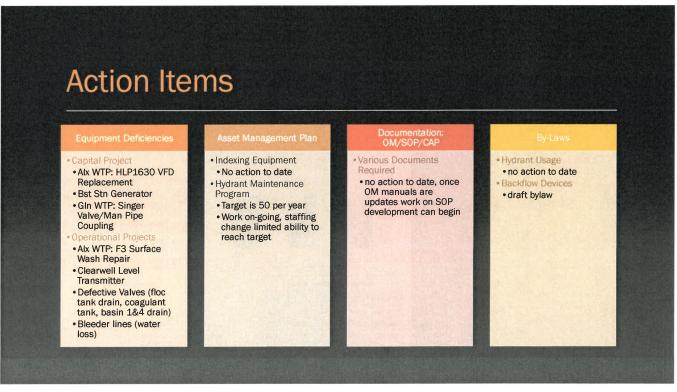

21

Conclusions

- No source shortfalls or capacity issues at this point for both Glen Robertson and Alexandria
- ►No major changes to risk or processes for both systems
- System growth
 - ➤ No major expansion to system planned in the next year
 - > Processes and standards being created at County Level, to add additional TWP requirements
 - >Other limiting factors such as wastewater system capacities and servicing areas shortfall
- ➢Infrastructure refurbish/replacement in WTP/Distribution
 - > Planned equipment repair/refurbishment
 - ➤ Planned watermain replacement program in Alexandria
 - ➤ Planned future work towards Alexandria on-going water loss
 - ➤ Maxville Water Project follow-up requirements (to be determined)
